PROFESSIONAL SUMMARY

Full-stack developer (React/Next.js, TypeScript, Node.js, PostgreSQL, MongoDB) with production freelance experience, including sole ownership of a live e-commerce platform for an industrial client (asthaengineering.com), plus hands-on QA experience testing production systems at AZAI Labs. CSE undergraduate at SUST (CGPA 3.56/4.00), seeking internship, part-time, or junior full-stack developer / software engineer roles.

EXPERIENCE

Software QA Engineer Intern - AZAI Labs

Jul 2026 – Present

Remote (Dhaka, Bangladesh) · Manual QA, Jira, FUR4 & Rockerz platforms · [LinkedIn](#)

- Ran structured manual QA across 6+ production and staging portals (Refer, Admin, Dealer, Customer, Help Center, Platformz) across the FUR4 and Rockerz ecosystems, reporting issues like OTP/captcha bypasses, broken referral tracking, and currency/DDP calculation errors.
- Wrote clear, developer-actionable Jira reports (300+ tickets filed), consolidating bugs that share a root cause into single tickets instead of filing duplicates per page.

Full Stack Web Developer (Freelance) - Astha Engineering & Solutions

Apr 2026 – May 2026

Industrial automation parts supplier · Dhaka, Bangladesh · React.js, Node.js, Express.js, PostgreSQL, Prisma, Tailwind CSS

- Sole developer - designed, built, and deployed a production e-commerce platform end-to-end for a real client; live at asthaengineering.com.
- Engineered an 11-table PostgreSQL schema with Prisma ORM, supporting a 500+ product catalog in English, with brand/category management, wishlists, and repair-job tracking.
- Built a REST API (40+ endpoints) with JWT authentication, refresh-token rotation, and role-based access control (Admin/Customer), plus Cloudinary image management.
- Delivered an admin dashboard enabling non-technical staff to run daily operations - products, categories, and repair jobs with WhatsApp-integrated inquiries - without code changes.

PROJECTS

StudyBondhu - Full-Stack Study Platform for HSC Students

Next.js, TypeScript, Prisma, PostgreSQL, tRPC, NextAuth, Redis, Vitest, Playwright · [GitHub](#) · [Live](#)

- Built a full-stack study platform for HSC students: chapter-by-chapter curriculum tracking, auto-graded mastery quizzes, and topic-level exam breakdowns instead of a single score.
- Modeled a 28-table Prisma schema covering the curriculum hierarchy, offline-synced progress tracking, a confidence-vs-quiz mastery engine, and an append-only points ledger feeding denormalized leaderboard stats.
- Built weighted leaderboards, streaks, and a routine/to-do builder, with free/Pro tiering scaffolded for subscriptions; covered core flows with Vitest unit tests and Playwright end-to-end tests, and self-tested manually throughout.

Halioo - RAG Document Chatbot

React, Node.js, Express, PostgreSQL + pgvector, Prisma, Google Gemini API, LangChain · [GitHub](#) · [Live](#)

- Built a full-stack RAG chatbot: users upload PDF/TXT documents and receive answers grounded in their own content, with source citations via vector similarity search over pgvector embeddings.
- Implemented token-by-token response streaming (SSE), JWT authentication with per-user data isolation, and persistent chat history; deployed live across Vercel, Render, and Neon.

QueueStorm - AI Support Copilot

Node.js, Express, Google Gemini API, Zod, Docker · [GitHub](#) · [Live](#)

- Built an AI-assisted ticket analyzer for financial-service customer support, combining rule-based decision logic (verdict, case type, department) with LLM-generated responses, so outcomes stay consistent even when the LLM output varies.
- Added a safety filter blocking or rewriting LLM output that requests credentials or makes unauthorized promises, plus multi-key Gemini failover and Zod-validated schemas; packaged as a 69.5MB Docker image with a live Render deployment.

EDUCATION

Shahjalal University of Science and Technology (SUST) - Sylhet, Bangladesh

Aug 2024 – Feb 2029

BSc in Computer Science & Engineering · CGPA: 3.56 / 4.00

SKILLS

Languages: JavaScript, TypeScript, C++, C, Java, Dart

Frontend & Mobile: React.js, Next.js, Tailwind CSS, HTML, Flutter

Backend: Node.js, Express.js, REST API Design, JWT Authentication

Databases: PostgreSQL, MongoDB, Prisma ORM, pgvector

Tools & Testing: Git, GitHub, Docker, Postman, Vitest, Playwright, Vercel, Render, Neon, Cloudinary

ACHIEVEMENTS

- Built ReLife, an AI-powered preventive healthcare platform, as backend lead of team SUST_NEWBIES at the Hack For Health 2026 Hackathon ([GitHub](#)); solved 130+ problems on LeetCode ([me_nayeem](#)) and 120+ on Codeforces ([me_nayeem](#)).
